CATALOGUE Branded promotional textile

Care Innovation Responsibility

PERSONAL CARE

Use the help of our professionally trained business team. They will gladly help you with the smooth progress of your order by phone, or in person.

PRODUCT

Check the quality of our products by yourself. You can visit us in Ústí nad Labem and Ostrava, or in our showrooms.

DISTRIBUTION

Our intelligent logistics center in Ostrava ensures orders are delivered in time. With 25 mil. pcs capacity, we can satisfy even the over-limit orders.

Certification & Quality

Oeko-Tex Standard 100 is world-respected quality seal for textile products, made of only health-conscious materials.

BSCI is Business Social Compliance Initiative, which purpose is to secure that the market enter only products, that have been produced with respect to the basic working and ethic rights.

WRAP is an independent nonprofit corporation, which ensures legal humanitarian and ethical production all around the world and awards companies by relevant certificate.

Superbrands is the most accredited global authority in the branch of the business awarding. The Superbrands seal is a sign of the special place that the awarded brand holds on the local market and acknowledging that fact.

GOTS it an acknowledged Global Organic Textile Standard International Working Group. Stipulates strict ecological and social rules for all phases of the production of organic textiles.

The main goal of the Green Company project is environment protection and elimination of the negative impact of human activity by securing the effective recycling of electronic waste.

Design Comfort

Piccolio

The widest offer of textile for promotional purposes, sports and casual wear. All of the products are designed for easy brand application by embroidery or printing.

The Malfini Premium[®] brand is known for the extra care we put in every detail - starting from the cut, through the material selection, ending in the elegant design.

Piccolio is here for you! Not only because of the affordable prices but also because of the simple cuts, suitable even for the most wildly creative idea!

RIMECK® workwear is made of top quality high-weight fabrics. In the outdoor collection you will find them combined with the certificated CORDURA® material.

Collection

Global Organic Textile Standard (GOTS)

GOTS is recognized as the world's leading processing standard for textiles made from organic fibers. It defines highlevel environmental criteria along the entire organic textiles supply chain and requires compliance with social criteria as well. The use of organic fibers from organic agriculture, the elimination of toxic substances and substances harmful to the environment and the introduction of a minimum wage, is only a small excerpt from the binding GOTS criteria. You can be sure that products marked with the GOTS logo are made with social and environmental responsibility.

The GOTS logo and the license number are also placed on the on back neck label, together with the symbols of maintenance.

Piccolio RIMECK

Products from the MALFINI® Collection excel in a variety of cuts, weights, materials and colours but they have one thing in common. You can rely on their quality and comfort. Whether for advertising purposes, sports or everyday wear, they will elegantly wear your print or embroidery.

Basic 129 Heavy New 137 Classic 101

100 % COTTON

is characterized by properties such as softness, pliability, strength, absorbency and breathability.

SINGLE JERSEY

Smooth elastic knitwear popular mainly in T-shirts and polo shirts production.

SILICONE FINISH

The silicone finish is similar to the effect of fabric softner, however more lasting.

POPLIN

Mostly used type of material for shirts production. It is extremely soft, pleasant to the touch, though stiff enough.

CONSTRUCTION DETAILS

Darts, folds or tucks shape the figure well and allow for plenty of movement.

TWO-PIECE SHIRT COLLAR

is formed by two-cut pieces - stand collar and upper part of hem.

► detail Chic 207

FRENCH TERRY

Smooth weave with supplementary thread which increases strenght, absorption and the volume of the fabric.

INNER SIDE BRUSHED

Reverse side of the material enhanced with supplementary thread is fluffed by mechanical process. Such way treated surface has a larger volume and shows warmer properties.

RIB KNIT WITH ELASTANE

Addition of elastane increases the elasticity and ensures the shape stability in rib knit.

Q

TERRY

A three-dimensional fabric with very soft touch and excellent absorbent properties.

CLOTH

Cloth fabric is made of strong, regularly repeating weave that has the same appearance on the outside and the reverse.

CROSS STITCHING

The straps of linen bags are rip resistant because of the reinforcement of cross stitching.

> Terry Towel 908 Carry 901

TERRY & bags

Small Towel

Terry, 100 % cotton $▲ 350 g/m^2, 30 \times 50 cm$

high-quality terry cloth, suitable for embroidery soft and absorbent, without border woven label may serve as a hanging loop

TER

Print & embroidery

184

DIGITAL PRINTING

An ideal technology for orders of a low quantity. A direct print is made on a state-of-the-art KORNIT[®] printer by using special water-based pigmented inks. The printing is of a photo quality and resolution and is guaranteed to be wash-resistant up to 40 °C. The textile can be ironed from the reverse side.

SUBLIMATION PRINTING

Is suitable for textiles made of min. 65 % synthetic fibre. Disperse dye is printed on a sublimation paper underlay from which it is transferred to the textile in the form of vapour by using heat and pressure. The printing does not need fixation. The stability of colours is very good, imitations (significantly more expensive) of colourful woven goods are barely distinguishable from originals. In addition, the original material properties such as breathability and washability are preserved. This printing method is ideal for both transferring photographs and other images and is suitable for piece as well as serial production.

SILK-SCREEN PRINTING - DIRECT PRINTING

The oldest and so far the most effective textile printing technology. We use a machine which enables us to reach high daily production (up to 15 000 prints) while maintaining the same print quality from the first to the last print of the order. Thanks to this technology we are able to print practically any motif - from the simple and monochromatic to the photo-realistic one. The printing is guaranteed to be wash-resistant up to 40 °C. The printing can be ironed from the reverse side.

TRANSFER PRINTING

A printing method where a motif is first printed on a special transfer foil, then fixed with glue and subsequently transferred to the textile by using heat and pressure. This printing method is applicable to all kinds of products and is mainly used where a direct print is not suitable. It cannot be applied to water repellent materials. The printing can be ironed from the reverse side.

LASER ENGRAVING

The modern technology allows engraving on the textile by using a laser beam. It is unique and so far uncommon branding of fleece products. The final motif is burnt into the fabric (it's plastic) and so lasting forever. Since there is no paint or yarn application, the resulting graphic is unicolour - of the colour of the textile.

EMBROIDERY/EMBROIDERED PATCHES

This is a very high-quality way of presenting motives, logos or slogans on textile products. To be able to sew a certain motif onto a product we have to create an embroidery pattern for which we need to get a high-quality digitized model(.tif, .cdr, .pdf, .ai, .epg). Then your motif is transferred into the sewing machine's program and is embroidered either directly on the product or in the form of a patch sewn or glued on it.

PRESSING

Suitable for 100% cotton products without buttons and zips that could be damaged by the pressure. This technology enables pressing of products into a shape chosen by you so you get an unusual gift or promotional item. You can select from our library of shapes or send us your own design.

GLITTERING STONES

This special technology can be used for any motif 's size or colour combination. The transparent or opaque stones are available at the size from 1,5 up to 8 mm The minimum order for textiles with this application is 200 pieces. Products decorated this way have to be washed inside out at 40 °C.

COTTON

The most popular natural material in the fashion industry. Cotton is characterized by properties such as softness, pliability, strength, absorbency and breathability. It is pleasant to the touch and resists higher temperatures. It is often used in combination with synthetic materials or elastane.

VISCOSE

Fiber made based on regenerated cellulose. The input raw material for the production is wood or cotton pulp. Viscose is breathable and it has great absorptinon features. Compared to cotton, it is softer, shinier and finer.

BAMBOO FIBER

Fiber made of bamboo based on regenerated cellulose. It has thermoregulatory, antibacterial, antimycotic and antistatic properties. Bamboo fiber is stronger along with three times higher absorbency than cotton, resistant to frequent washing and keeps its properties for a long time. We do not recommend using fabric softener in order not to reduce absorbency of the material.

• synthetic materials

ELASTANE

Very fine, strong, elastic polyurethane fiber. The key feature is its high elasticity. Elastane can be stretched out from three up to seven times of its original length without breaking. It is always used in combination with other materials, ensures dimensional stability, increases elasticity and reduces material wrinkling. Elastane is prone to high temperatures.

POLYESTER

Synthetic fiber made by modification of the input material. The fiber is very strong so it can be made thick or very fine (micro polyester). Material is durable, quick-drying and easy-care. It is suitable for sports and physical activities. Through chemical and mechanical processes various modifications of the material properties can be achieved depending on the purpose of use (insulation, impregnation).

POLYAMIDE

The process of polyamide production is similar to the one of polyester. The material is durable, easy-care and has a good shape stability. It dries quickly thanks to low moisture absorption. It has twice the greater abrasion resistance than polyester. The fiber can be made thick or very fine as well as poyester. Mechanical and chemical treatment influences the final product's properties.

POLYPROPYLEN

Smooth and hard surface fibres have high abrasion resistance. They show good hydrophobic properties which, due to very low water sorption, preserve the strength and dimensional stability of the material even in damp environments. The final material is lightweight and shows good thermal insulation.

finishes

PRESHRUNK COTTON

During the production process of cotton products the space between the fiber gets reduced which eliminates the risk of shrinkage of the fabric during the washing and drying cycle. This process allows the final product to be washed at high temperatures for the purpose of removing any impurities and bacteria.

MERCERIZED COTTON

The process of mercerization consists of immersing the cotton yarn into a bath for the purpose of changing their sections and leveling uneven fibers. The fiber cross-section thus obtains an almost perfect shape. The final material becomes smoother shinier and softer. Merceration results in higher strength and better color stability of the material.

SILICONE FINISH

however longer lasting. It makes the product soft to the touch, more dirt-proof and the prints stick much better.

ANTIPILLING FINISH

Antipilling finish minimizes the release of fibers and prevents fabric's pilling. This process results in fibres fixation and stabilization. It reduces damaging of the upper part under excessive use and friction and extends the product lifetime and functionality.

NEW MATERIAL

NEW ORGANIC COTTON

Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes. The biggest producers are Turkey, India, the USA and China.

For more about GOTS certification see page 8-9.

branded materials

SUPIMA[®]

The brand represents the finest cotton of 1% worldwide production. This type of the US grown Pima cotton has over a hundred years 'history. Its unique extra-long fibers are twice the strenght of regular cotton. They are resistant to pulling, breaking and tearing which makes products made of it incredibly smooth, resistant, nonpilling and keeping their appearance for a long time.

NANOtex'

NANOtex® RESISTS SPILLS

Certified fabric which has been fundamentally transformed through nanotechnology. The result fabric repels liquids, extends the lifetime, retains natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

The silicone finish is similar to the effect of fabric softner,

BR

SOFTSHELL

Softshell is a laminated textile for modern and sports clothing and clothing for outdoor activities. It is divided into membrane and nonmembrane. Clothing made from this material is light, warm, elastic and has high mechanical resistance. Softshell with a membrane can be waterproof and simultaneously air permeable.

CORDURA® CLASSIC

The CORDURA® fabric is made in accordance with approved standards of the company INVISTA. CORDURA[®] holds of stains, resists tears and abrasions like no other fibers. Its strength ensures high longevity. CORDURA® is a registered trademark of INVISTA for durable fabrics.

3M™ STRIPES

3M retroreflective stripes increase visibility of the person who wears the garment, thereby reduce possibility of accidents. 3MTM technology of reflective materials is based on a layer of microscopic glass spheres mounted on the substrate fabric layer with a mirror surface. On 1 cm² of the fabric there are up to 30,000 glass beads. These beads ensure reflection of light beams coming to the stripe of reflective material after twice refraction back to the source.

187

Overview of fabrics

SINGLE JERSEY

Fine weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave features ductility, softness and easy unstitching. The quality of the final product depends on the thread used for making the fabric. Products are manufactured from high quality ring spun thread.

PIOUE

Weft knitted fabric patterned with geometrical relief on outside. On the reverse side it is enhanced with supplementary thread. This type of knitting is popular for production of polo shirts and clothing ideal for sports and leisure activities. The products made from it are breathable and easy to maintain

INTERLOCK PIQUE

Warp knitted fabric with a pattern in which two fully interlocking rows alternate with a one-face row. One side of the knitted fabric has twilled separate stitches while the other side is plain. This type of knitting is popular for production of polo shirts and clothing ideal for sports and leisure activities. The products made from it are breathable and easy to maintain

shows warmer properties.

DOUBLE FACE

Double face knitting also called double-sided. The wave is densely alternating front and back uprights on the outside and reverse material sides. In the unstretched position only front stitches are visible, reverse stitches are visible only while stretched. This knitted fabric looks identically from the back and it is highly elastic in the transverse direction

RIB KNIT

Double-sided knitted fabric consisting of rib pattern indicated by 1:1 or 2:2. This information determines the ratio of regularly alternating vertical stripes of stockinette stitch with vertical stripes of reverse stockinette stitch. Rib knit fabric is elastic and it is mostly used for collars, cuffs, plackets and hem of poloshirts and sweatshirts

FRENCH TERRY - not brushed

Weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave is enhanced with supplementary thread that leads along the reverse side of the fabric. The supplementary thread increases strenght, absorption as well as the volume of the fabric.

FRENCH TERRY - brushed

Weft knitted fabric with characteristic dendritic columns on the outside and brushed soft on the reverse side. Reverse side of the material enhanced with supplementary thread is fluffed by mechanical process. Such way treated surface has a larger volume and

MALFINIO

TAL NIZA

FLEECE

Weft knitted fabric characteristic with brushed dense teaseled soft surface on both sides of the material. It has outstanding insulating attributes, long lifetime and easy-care. Material can be treated with antipilling finish. Products are suitable for embroidery and laser engraving.

CLOTH

Cloth fabric is made of strong, regularly repeating weave that has the same appearance on the outside and reverse side. With its simple and dense interlacing, it creates a steady and smooth surface suitable for printing and embroidery. Cloth fabrics are manufactured from high quality combed cotton or polyester.

Mostly used type of material for shirts production. It is extremely soft, pleasant to the touch, though stiff

amount of warp than weft threads.

OXFORD

Wave derived from canvas wave. The difference is that there are at least doubled yarns alternating when fabricating the fabric. Oxford is shinier than canvas. It has a wide range of use. It can be made from natural or synthetic varns.

NEW FABRICS

Fine weft knitted fabric with characteristic structure of slub fabric. To achieve this final effect, a yarn with thicker and thinner sections is used throughout the length which are created by varying the tightness of the twist. This fabric is also characterized by its elasticity.

NEW STRETCH FLEECE

Smooth outside, brushed inside functional stretch knit fabric with great thermo isolating properties. It is soft, lightweight, breathable and quick-drying material. It is suitable for sports and physical activities. Inner part of the material has antipilling finish.

enough. It is made by a cloth wave which has a higher

RIP STOP

Very strong regularly repeating wave. In this smoth fabric are interwoven thick warp and weft treads in the intervals of 5 - 8 mm. The surface gets an effect of a grided structure. This imaginary grid significantly increases the fabric rip and tear resistancy.

TWILL

Wave characteristic by diagonal spacing that is regularly repeated. It consists of alternating the system of warp and weft yarns. The fabric is very robust, tear-resistant and easy-care. The most common use of twill wave is in denim or workwear. The material is also popular for caps production. It can be smooth or brushed. The brush finishing makes the surface softer with matt appearance.

TERBY

Loop fabric consists of solid loops on both sides of the material. It is a three-dimensional fabric with very soft touch and excellent absorbent properties. It is ideal for towels and bath towels production in the material composition of 100% cotton or blend of bamboo fiber and cotton

NONWOVEN FABRIC

Fabric produced without knitting or weaving. Input material is a polypropylene polymer melt. The result is a smooth, flat, porous fabric with a relatively high tensile strength and low abrasion and bending strength. The material is popular in the industry due to low acquisition costs and good filtration and insulation properties.
